We provide a comprehensive range of consultancy services in flood risk and water management.

These services are supported by leading specialists in computational hydraulic modelling, hydrology, flood risk management, hydrometry, sustainable drainage and environment. Our expertise enables us to fully support sustainability and environmental assessment where climate change effects are influential.

Our skills are also applied to the preparation of adaptation strategies and advising on strategic and tactical responses to flood emergencies.

We are experienced in:

- Flood Risk and Consequence Assessments;
- Strategic Flood Risk Assessments;
- Catchment Flood Management Plans;
- Hydrological studies;
- Computational hydraulic modelling in 1, 2 or 3D;
- Flood forecasting;
- Hazard and vulnerability mapping;
- Wetlands hydrology;
- Hydrometric Monitoring;
- Rating Reviews;
- Expert Witness;
- Research and Training;
- Asset inspection and engineering design;
- Flood Risk Management; and
- Integrated Sustainable Drainage.

Key projects

River Trent Catchment Flood Management Plan: Environment Agency

Forward looking strategy and policy report for one of the largest river catchments in the UK

Hereford Town Centre Flood Risk Management Scheme: ESG

Flood Risk Management Strategy to facilitate regeneration

Strategic Flood Risk Mapping Framework: Environment Agency

Framework contract to provide hydrology, hydraulics, flood extent and flood hazard mapping

National Flood Hazard Policy Appraisal and Development: Environment Agency

Policy, analysis, appraisal, and communication of hazard

London 2012 Olympic & Legacy Flood Risk Assessment / Flood Risk Management Planning: London Development Agency / Olympic Delivery Agency

Strategic flood risk assessment, development of flood risk management options, and assessment of proposals
