

# JBA Consulting

JBA Consulting is one of the UK and Ireland's largest specialist hydrology and water science consultancies, with 12 UK and Ireland offices, 230 staff and a rapidly expanding portfolio of projects and clients throughout Europe. We have term consultancies with Yorkshire Water, Network Rail, the OPW in Ireland, Environment Agency in England and Wales and Rivers Agency Northern Ireland.

## Hydrology

JBA hydrologists have been involved in most of the major hydrology projects of the last decade including the Hiflows-UK project, the Irish Flood Forecasting Review, the Environment Agency's Flood Risk Management strategy, Defra's "Making Space for Water" initiative, surface water management plans, plus drought, low flows and water resource planning work.

We are an independent consultancy and entirely employee-owned. Our core principles are:

- To be different
- To be innovative
- To share our knowledge with colleagues and clients

We are one of the few consultancies with our own in-house research team and we dedicate a substantial proportion of our profits to research in the hydrological arena. This supplements the numerous contract research projects we undertake for clients.

## Skills and expertise

Our skills and experience cover all aspects of the water cycle including:

- Rainfall modelling
- Water resource management
- Flood risk assessment and mapping
- Flood flow forecasting
- Low flow/drought studies
- Hydrogeology

## Recruitment

We are looking for graduate to senior/principal level hydrologists to join our teams in Warrington, Skipton, Tadcaster, Newcastle upon Tyne, Limerick, Edinburgh and Wallingford. The projects you will work on are demanding, and range from hydrometry, groundwater and EIAs through to broad scale environmental modelling. You will therefore need a postgraduate qualification in hydrology or catchment science, a good basic knowledge of statistics and GIS, and the ability to devise and implement bespoke solutions to tight timescales.

We are particularly interested to hear from those interested in short-term (3-12 month) assignments in Europe, the USA and Asia.

In addition to a competitive salary, you will enjoy a comprehensive benefits package including: personal pension; permanent health insurance; medical, dental and eye care assistance; profit share and a personal training budget. Assistance with gaining CEng, CEnv, CSci or CGeog status through CIWEM, ICE or the RGS is provided.
