

**The BHS Register of Consultants in Hydrology includes both consultancy firms, independent consultants with practices in hydrology and water resources.**

### Consultancy Firms

In the first section, consultancy firms are each allocated a full page to advertise their hydrology related services. These adverts are useful to organisations looking for a wide range of services in the hydrological field.

### Manufacturers of Hydrometeorological Equipment and Software Products

The second section is for firms or organisations that manufacture hydrometric or hydro meteorological equipment or sell software products. Each are allocated a full page to advertise their hydrology related services. This listing will be useful to organizations interested in purchasing equipment or developing or purchasing software packages in the hydrological field.

### Independent Consultants

The third section contains details of BHS members who act as independent consultants in the field of hydrology. This was initiated in response to the many requests received by BHS centrally, or by individuals and organisations such as the Centre for Ecology & Hydrology, for the names of those who might be available for specific tasks. The listing will be useful to other BHS members who are asked to recommend somebody.

### The Listing

Independent members pay an annual fee (currently £15) for inclusion in the register; this covers the cost of printing and distribution. Any member or firm who would like to be included in the next edition is invited to send the relevant details to:

*Tim Fuller (Secretary, BHS)  
c/o Institution of Civil Engineers, 1 Great  
George St, Westminster, London SW1P 3AA*

To ascertain a consultant's experience and expertise, potential clients are asked to make direct contact. No officer of the British Hydrological Society or member of staff of the Institution of Civil Engineers is authorised to give any further information.

### Disclaimer

BHS provides this information as a service to its members and to others who may be looking for hydrological advice and assistance. The Society has merely reproduced information supplied by those listed and accepts no responsibility for the accuracy of the contents. Neither does the Society endorse the listed individuals as being suitable for any particular task. The list is intended purely to facilitate contact and it is entirely a matter for the potential client to satisfy himself or herself of the consultant's suitability.
