

Wallingford HydroSolutions (WHS) is an expanding environmental & information technology consultancy.

We offer specialist hydrological services particularly in water resources, hydrometry, environmental impact assessment, water quality modelling and monitoring. We provide a personal service delivering technically excellent solutions to meet the requirements of our private sector clients and regulatory agencies within the UK.

We currently have offices based in Wallingford, Oxfordshire and Dundee.

WHS consultancy services

Our multi disciplinary team can provide a comprehensive range of hydrological, water quality and aquatic habitat consultancy services which include:

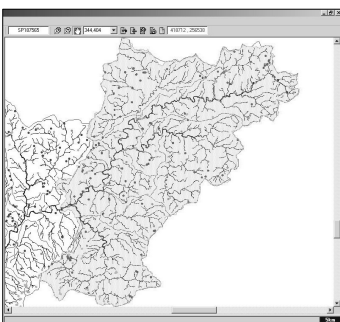

- Field services & hydrometry
- water resources & hydrological modelling
- environmental impact assessments
- environmental modelling & water quality
- flood risk management and assessment
- hydropower potential assessments
- CAR licence application support

WHS software products

Our industry standard software products include the:

- Flood Estimation Handbook (FEH) software suite comprising the FEH CD-ROM data resource and the WINFAP-FEH and ReFH modelling software;
- LowFlows software for estimation of river flows and resource availability within ungauged catchments; and
- HydroTools - a cost effective hydrological analysis toolkit.

Training courses for all our software products take place throughout the year – please see our website for further details and dates.

We also offer a cost effective **retrieval service** providing river flow estimates from LowFlows at any location on the river stream network in the UK.
